INTRODUCTION

INTRODUCTION

Flip your photos in a very fashionable way. The PhotoClick component allows you to create a very nice imagegallery which will impress your visitors.

The PhotoClick component displays multiple images with a stack effect. The images can be flipped by clicking on a specific image in the stack. Images can be added or changed directly through an external XML file.

code loaded INSTALLING

INSTALLING

Installing is very easy. Just edit the pictures.xml file, upload your pictures and you are ready to go.

THE XML FILE

```
<root>
  <gallery headline="LANDSCAPES">
    <pic path="pictures/pic1.jpg" breite="330" hoehe="500" desc_title="DANCING IN THE DARK"><![CDATA[Picture
description goes here. <br>description.]]></pic>
    <pic path="pictures/pic2.jpg" breite="550" hoehe="370" desc_title="WITH COMPLIMENTS"><![CDATA[Picture de-
scription goes here. <br>description.]]></pic>
  </gallery>
</root>
```

It looks pretty complex but it is not.

Headline

This is where you enter the category of the gallery.

path

This is where you enter the name of the picture and the folder where it is located.

breite

The width of the picture

hoehe

The height of the picture

desc_title

The title of the photo

description

enter the description of the photo

Done. you are ready to go.
